Down Lighter Hoods

Product description

Our innovative and market leading downlight hoods maintain the building fabric integrity around ceilings downlights.

These devices are fitted within minutes to your vapour control membrane or plaster slab to form a permanently airtight, sound absorbing and moisture controlling barrier –allowing you to enjoy the benefits of recessed lighting.

We supply a range of products to suit the most challenging specifications and working environments.

Benefits

1. Improves the energy efficiency of your building.
2. Allows insulations to be applied over and around recessed lights.
3. Eliminates draughts permeating through your recessed lights.
4. Reduces noise transfer between floors.
5. Prevents moisture damage to your building fabric in the vicinity of the down light.
